Full Subnetting

aim: Implementation of subnetting in Cisco packet tracer

Procedure:

Create the network using switches, router, PC's

2) The IP address will be as follows

→ router R1

* Gigabit ethernet 0/0: 192.168.1.1

* Gigabit ethernet 0/1: 192.168.2.1

also enable the 'on' option for both gigabit ethernet on the page

→ switch S1

* no IP

→ LAN-1

• PC 0

IP address: 192.168.1.11

Gateway: 192.168.1.1

• PC 1

IP: 192.168.1.12

Gateway: 192.168.1.1

• PC 2

IP: 192.168.1.13

Gateway: 192.168.1.1

→ switch S2

* NO IP

→ LAN-2

• PC 5

IP address

Gateway:

• PC 6

IP: 192.16

Gateway: 192

Diagrammatic

→ switch S₂

* NO IP

→ LAN-2

• PC 5

IP address: 192.168.2.11

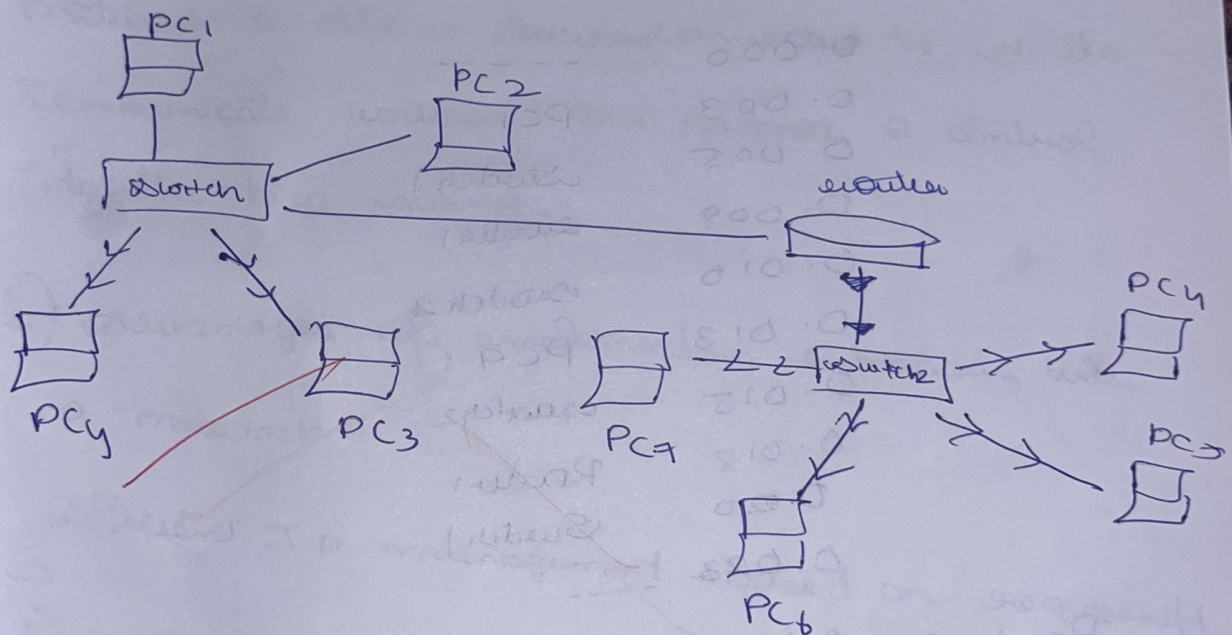

Gateway: 192.168.2.1

• PC 6

IP: 192.168.2.12

gateway: 192.168.2.1

① Diagrammatic representation:

Output:

Now lets assume the sender is PC 1 &

Receiver PC 9

while simulating & observing, we get the simulation panel.

Student Observation:

a) Write down the understanding of subnetting

Subnetting is the process of sending a large IP network and manageable section called subnets. Each subnet act as independent network & allow devices connected to it to communicate within the subnet & control traffic b/w subnets.

b) Advantages of implementing subnetting within a network.

- efficient IP management - based on requirements
- reduce network congestion - limit broadcast traffic to individual subnets.

Result :

The implementation of subnetting in Cisco has been done successfully.
